Quality Control Narrative

Scope
Twenty (20) grass samples were submitted to TMA/Skinner & Sherman Laboratories, Inc. on August 13, 1992 from TMA/Norcal. The samples were analyzed for the USEPA CLP TAL metals. The analysis were performed under TMA/Skinner and Sherman work order S208146.

Methodology
The samples were prepared, analyzed and reported in accordance with the USEPA Contract Laboratory Program Statement of Work ILM02.

Discussion
All quality control requirements were met for the samples with the following exceptions:

The iron, lead, manganese, and zinc laboratory duplicates exceeded the control limit requirements.

Please feel free to call if there are any questions concerning this package.

Respectfully submitted,

TMA/SKINNER & SHERMAN LABORATORIES, INC.

David N. Peterson
Assistant Laboratory Manager

RECORD OF DISPOSITION

ROD-92-00179
Record of Disposition No.

DATE: October 28, 1992 | LABORATORY: TMA

PROJECT TITLE/NO.: 100 Area Biota | NCR NO.: N/A

SAMPLE IDENTIFICATION NUMBERS:

►► B06N88

DESCRIPTION OF EVENT:

►► Sample B06N88 was overlooked by a TMA Laboratory technician, and was not noticed until the data package was being assembled.

DISPOSITION OF SAMPLES:

►► The mercury analysis on Sample B06N88 was canceled per telecon with Steve Weiss on October 22, 1992.

APPROVAL SIGNATURES:

K. N. Pool — 10/29/92
OSM Project Coordinator (Print/Sign Name) — Date

S. Weiss — 11/2/92
Technical Representative (Print/Sign Name) — Date

N/A
Quality Assurance (Print/Sign Name) — Date

Quality Control Narrative

Scope

Twelve (12) grass samples were submitted to TMA/Skinner & Sherman Laboratories, Inc. on August 13, 1992 from TMA/Norcal. The samples were analyzed for the USEPA CLP TAL metals. The analysis were performed under TMA/Skinner and Sherman work order S208147.

Methodology

The samples were prepared, analyzed and reported in accordance with the USEPA Contract Laboratory Program Statement of Work ILM02.

Discussion

All quality control requirements were met for the samples with the following exceptions:

Sample BOGN88 was not analyzed for mercury due to a missed holding time. The client requested that it not be analyzed past holding time.

The aluminum, cadmium, iron, lead, manganese, magnesium, and potassium laboratory duplicates exceeded the control limit requirements.

The arsenic, mercury and zinc matrix spike recovery exceeded the control limit requirements.

The calcium, iron and magnesium ICP serial dilution exceeded the control limit requirements.

Please feel free to call if there are any questions concerning this package.

Respectfully submitted,

TMA/SKINNER & SHERMAN LABORATORIES, INC.

David N. Peterson
Assistant Laboratory Manager

MESSAGES

For SAMPLE BOGN88 (SAS 5208147-06) the Hg holding time was missed due to the analyst not analyzing the sample. the Mercury analysis system autosampler was missing samples at that time and it was not noticed it had not run that sample due to an analyst error. the autosampler has been repaired.

Should we go ahead and analyze the sample?

N2-08-041

TMA

MEMORANDUM

To: Karl Pool

From: Dolores Sanchez D. Sanchez

Subject: Sample B06N88 (100A BIOTA)

Date: October 21, 1992

Sample B06N88, collected on 7/21/92 and received by TMA on 8-5-92, was not analyzed for Mercury due to an oversight by the analyst. Should we go ahead and analyze the sample for Mercury? Please advise.

Per Karl Pool on 10-23-92, cancel Hg for this sample.

SA6000-406 (05/90)

SDG 7068 Contact Dinkar P. Kharkar	Client Westinghouse Hanford Contract MBH-SVV-069262

CASE NARRATIVE

1.0 GENERAL

The result of the Reed Canary Grass samples from Location 100A (TMA/Norcal Group 7068) are reported herein. TMA/Norcal Group 7068 is comprised of the eleven samples listed on the Chain-of-Custody documents and is identified as Sample 1 through 11.

1.1 CHAINS-OF-CUSTODY

This report includes data from samples delivered under Chain-of-Custody documents Field Logbook No. WHC-N-444-1.

1.2 SAMPLE VOLUME

Paper bags containing the samples were received for the analyses.

1.3 MISSING SAMPLES

All samples were accounted for in an undamaged condition.

1.4 HOLDING TIMES

The collections were made on 7/21/92 and the sample processing was initiated within 180 days of collection.

2.0 QUALITY CONTROL

The internal quality control consisted of one sample each of a laboratory control, a blank, and a replicate. All original analyses were performed with QC samples 7068-12, 13, and 14.

The QC samples were prepared and labelled by the quality control officer. Copies of The QC notebook pages are included in the data package.

2.1 LABORATORY CONTROL SAMPLES

The LCS recovery of ^{90}Sr was 50% with a high error of 45%. The sample had a long-lived component which we normally do not see in the samples. It has contributed to a high error in the sample. The LSC recoveries of gamma nuclides were good and they meet the RDL requirements. The MDA's for gamma nuclides were higher than the RDL because only small aliquots (49.0 g to 120.0 g) were available for gamma analysis instead of 750.0 g required by MDA calculations.

2.2 BLANKS

MDA's for ^{90}Sr meet the RDL requirements, except for the gamma nuclides. Sample aliquots smaller than the aliquot required by MDA calculations were used for gamma analysis.

iv 2/27/96 M.H.

SDG 7068 Contact Dinkar P. Kharkar	Client Westinghouse Hanford Contract MBH-SVV-069262

CASE NARRATIVE

2.3 REPLICATES

Results were satisfactory for ^{90}Sr, and gamma nuclides. The MDA's for gamma nuclides were higher due to small aliquots available for gamma analysis.

3.0 ANALYTICAL NOTES

3.1 Strontium-90 Analyses: The average yield for fourteen analysis (87 ± 23%). The lowest yield was 51% and the highest was 96%. The average MDA was 0.71 ± 0.24 pCi/g. Positive ^{90}Sr concentration was not found in the samples. The ^{90}Sr concentrations are calculated on the basis of dry sample.

3.3 Gamma Scan Analyses: Gamma scan analysis did not find positive concentration of gamma nuclides. The concentration of gamma nuclides was below RDL. The concentration is based on dry sample.

CHAIN OF CUSTODY

Custody Form Initiator: J.G. Lucas

Company Contact: Don Landeen — Telephone: 376-1038

Project Designation/Sampling Locations: 100A Biota — Collection Date: 7-21-92

Reed Canary Grass

~~Ice Chest~~ Box No.: B-3 — Field Logbook No.: WHC-N-444-1

8-8-92

Bill of Lading/Airbill No.: 2509869714 — Offsite Property No.: W92-0-0577 #6

Method of Shipment: Emery

Shipped to: TMA/NORCAL Richmond, CA

Possible Sample Hazards/Remarks: None

100 AREA BIOTA RADIOCHEMICAL DATA VALIDATION REPORT

FOR SDG N2-08-037-7067 (Reed Canary Grass)

The 100 Area Biota Radiochemical Validation was performed to the requirements outlined in the draft procedure titled "Data Validation Procedure for Radiological Analysis, Rev. 0, June 18, 1991."

The SDG consisted of 21 samples. All samples were identified on the Chain of custody as being "Reed Canary Grass". All samples were analyzed at the Thermo Analytical Laboratory Norcal Laboratory. Radiological parameters of interest were: Gross Gamma Scan, and Strontium - 90.

The radiological validation process, in part, is a detailed and in-depth technical review of the laboratory counting systems used, standards and quality control used in analyzing the samples. Review of chain of custody requirements, completeness of data reported and contract required detection limits are also part of the validation process. The technical review of the laboratory counting systems is documented on the attached appendices taken from the radiological data validation procedure. Sample analysis batch Quality Control (QC) and instrument performance are reviewed on an individual delivery group basis.

NOTE: This sample delivery group (SDG) consists of 21 samples. This exceeds the contract requirement of a maximum SDG size of 20 samples. Additional batch specific QC was not run with the additional sample within this SDG. This is an issue of contract compliance and does not have a negative impact on the data quality of this SDG.

Data limitations and explanation of qualifiers for SDG # N2-08-037-7067

STRONTIUM-90

The processing group contains the following sample numbers: B06N63, B06N64, B06N65, B06N66, B06N67, B06N68, B06N69, B06N70, B06N71, B06N72, B06N73, B06N74, B06N75, B06N76, B06N77, B06N78, B06N79, B06N80, B06N81, B06N82, and B06N83.

The carrier recovery for one sample is below the limit of acceptability. Sample B06N83 has carrier recovery of 22.6% which is below the 30% acceptance limit. Qualify sample B06N83 as "R" unusable.

All other QC samples and method specific requirements are within acceptable limits. NOTE: Activity was detected in the blank but the activity is below the MDA.

100 AREA BIOTA RADIOCHEMICAL DATA VALIDATION REPORT

FOR SDG N2-08-037-7067 (Reed Canary Grass)

GAMMA SCAN

The processing group contains the following sample numbers: B06N63, B06N64, B06N65, B06N66, B06N67, B06N68, B06N69, B06N70, B06N71, B06N72, B06N73, B06N74, B06N75, B06N76, B06N77, B06N78, B06N79, B06N80, B06N81, B06N82, and B06N83.

The K-40 sample and duplicate sample results exceed acceptable limits. The Relative Percent Difference of the sample and duplicate sample for K-40 is 40% which exceeds the 35% limit. Qualify all K-40 results as "J" estimated. All other QC samples and method specific requirements are within acceptable limits. Do to the limited amount of sample mass that could be provided for these samples, the laboratory could not obtain required detection limits.

SDG 7067 Contact Dinkar P. Kharkar	Client Westinghouse Hanford Contract MBH-SVV-069262

CASE NARRATIVE

1.0 GENERAL

The result of the Reed Canary Grass samples from Location 100A (TMA/Norcal Group 7067) are reported herein. TMA/Norcal Group 7067 is comprised of the twenty-one samples listed on the Chain-of-Custody documents and is identified as Sample 1 through 21.

1.1 CHAINS-OF-CUSTODY

This report includes data from samples delivered under Chain-of-Custody documents Field Logbook No. WHC-N-444-1.

1.2 SAMPLE VOLUME

Paper bags containing the samples were received for the analyses.

1.3 MISSING SAMPLES

All samples were accounted for in an undamaged condition.

1.4 HOLDING TIMES

The collections were made on 7/21/92 and the sample processing was initiated within 180 days of collection.

2.0 QUALITY CONTROL

The internal quality control consisted of one sample each of a laboratory control, a blank, and a replicate. All original analyses were performed with QC samples 7067-22, 23, and 24.

The QC samples were prepared and labelled by the quality control officer. Copies of The QC notebook pages are included in the data package.

2.1 LABORATORY CONTROL SAMPLES

The LCS recovery of ^{90}Sr was good and was within the 3 σ limits. The MDA for ^{90}Sr met the RDL requirements. The LSC recoveries of gamma nuclides were good and they were within 3 σ limits. The MDA's for gamma nuclides were higher than the RDL because only small aliquots (50.0 g to 93.0 g) were available for gamma analysis instead of 750.0 g required by MDA calculations. The matrix used for the lab control sample was water and not biota as shown in the sample and QC summary data sheets.

2.2 BLANKS

MDA's for ^{90}Sr meet the RDL requirements, except for the gamma nuclides. Sample aliquots smaller than the aliquot required by MDA calculations were used for gamma analysis. The matrix used for the lab control sample was water and not biota as shown in the sample and QC summary data sheets.

SDG 7067	Client Westinghouse Hanford
Contact Dinkar P. Kharkar	Contract MBH-SVV-069262

CASE NARRATIVE

2.3 REPLICATES

Results were satisfactory for ^{90}Sr, and gamma nuclides. The MDA's for gamma nuclides were higher due to small aliquots available for gamma analysis. The 2 σ error for ^{90}Sr is underlined because the error is greater than MDA.

3.0 ANALYTICAL NOTES

3.1 Strontium-90 Analyses: The average yield for twenty-four analysis was (66 ± 28%). The lowest yield was 23% and the highest was 91%. The average MDA was 0.95 ± 0.99 pCi/g. Positive ^{90}Sr concentration was not found in the samples. The ^{90}Sr concentrations are calculated on the basis of dry sample.

3.3 Gamma Scan Analyses: Gamma scan analysis did not find positive concentration of gamma nuclides except for sample numbers 7067-4 and 5. The concentration of gamma nuclides was below RDL. The concentrations are based on dry sample.

100 AREA BIOTA RADIOCHEMICAL DATA VALIDATION REPORT

FOR SDG N2-08-038-7068 (Reed Canary Grass)

The 100 Area Biota Radiochemical Validation was performed to the requirements outlined in the draft procedure titled "Data Validation Procedure for Radiological Analysis, Rev. 0, June 18, 1991."

The SDG consisted of 11 samples. All samples were identified on the Chain of custody as being "Reed Canary Grass". All samples were analyzed at the Thermo Analytical Laboratory Norcal Laboratory. Radiological parameters of interest were: Gross Gamma Scan, and Strontium - 90.

The radiological validation process, in part, is a detailed and in-depth technical review of the laboratory counting systems used, standards and quality control used in analyzing the samples. Review of chain of custody requirements, completeness of data reported and contract required detection limits are also part of the validation process. The technical review of the laboratory counting systems is documented on the attached appendices taken from the radiological data validation procedure. Sample analysis batch Quality Control (QC) and instrument performance are reviewed on an individual delivery group basis.

Data limitations and explanation of qualifiers for SDG # N2-08-038-7068

STRONTIUM-90

The processing group contains the following sample numbers: B06N84, B06N85, B06N86, B06N87, B06N88, B06N89, B06N90, B06N91, B06N92, B06N93, and B06N94.

The laboratory control sample (LCS) associated with this batch exceeds acceptable limits. The recovery of the LCS is 50% which is below the acceptable limit of 65%. All sample results are below the MDA of the method thus all samples are to be qualified as "UJ" estimated Non-detectable.

All other QC samples and method specific requirements are within acceptable limits. NOTE: Activity was detected in the blank but the activity is below the MDA.

1/31/93

100 AREA BIOTA RADIOCHEMICAL DATA VALIDATION REPORT

FOR SDG N2-08-038-7068 (Reed Canary Grass)

GAMMA SCAN

The processing group contains the following sample numbers: B06N84, B06N85, B06N86, B06N87, B06N88, B06N89, B06N90, B06N91, B06N92, B06N93, and B06N94.

All QC samples and method specific requirements are within acceptable limits. Do to the limited amount of sample mass that could be provided for these samples, the laboratory could not obtain required detection limits.

CASE NARRATIVE

1.0 GENERAL

The result of the Reed Canary Grass samples from Location 100A (TMA/Norcal Group 7068) are reported herein. TMA/Norcal Group 7068 is comprised of the eleven samples listed on the Chain-of-Custody documents and is identified as Sample 1 through 11.

1.1 CHAINS-OF-CUSTODY

This report includes data from samples delivered under Chain-of-Custody documents Field Logbook No. WHC-N-444-1.

1.2 SAMPLE VOLUME

Paper bags containing the samples were received for the analyses.

1.3 MISSING SAMPLES

All samples were accounted for in an undamaged condition.

1.4 HOLDING TIMES

The collections were made on 7/21/92 and the sample processing was initiated within 180 days of collection.

2.0 QUALITY CONTROL

The internal quality control consisted of one sample each of a laboratory control, a blank, and a replicate. All original analyses were performed with QC samples 7068-12, 13, and 14.

The QC samples were prepared and labelled by the quality control officer. Copies of The QC notebook pages are included in the data package.

2.1 LABORATORY CONTROL SAMPLES

The LCS recovery of ^{90}Sr was 50% with a high error of 45%. The sample had a long-lived component which we normally do not see in the samples. It has contributed to a high error in the sample. The LSC recoveries of gamma nuclides were good and they meet the RDL requirements. The MDA's for gamma nuclides were higher than the RDL because only small aliquots (49.0 g to 120.0 g) were available for gamma analysis instead of 750.0 g required by MDA calculations.

2.2 BLANKS

MDA's for ^{90}Sr meet the RDL requirements, except for the gamma nuclides. Sample aliquots smaller than the aliquot required by MDA calculations were used for gamma analysis.

SDG 7068 Contact Dinkar P. Kharkar	Client Westinghouse Hanford Contract MBH-SVV-069262

CASE NARRATIVE

2.3 REPLICATES

Results were satisfactory for ^{90}Sr, and gamma nuclides. The MDA's for gamma nuclides were higher due to small aliquots available for gamma analysis.

3.0 ANALYTICAL NOTES

3.1 Strontium-90 Analyses: The average yield for fourteen analysis (87 ± 23%). The lowest yield was 51% and the highest was 96%. The average MDA was 0.71 ± 0.24 pCi/g. Positive ^{90}Sr concentration was not found in the samples. The ^{90}Sr concentrations are calculated on the basis of dry sample.

3.3 Gamma Scan Analyses: Gamma scan analysis did not find positive concentration of gamma nuclides. The concentration of gamma nuclides was below RDL. The concentration is based on dry sample.

Validation Narrative - SDG: B06N63

1. INTRODUCTION

This report presents the results of inorganic data validation on the following sample delivery group and sample numbers which were analyzed by the Thermo Analytical, Inc. - Richmond, CA laboratory. The HEIS sample numbers associated with this group by SDG are listed below:

Data Package ID	HEIS Sample Numbers		Matrix
SDG: B06N63	B06N63	B06N73	Soil
	B06N64	B06N74	Soil
	B06N65	B06N75	Soil
	B06N66	B06N76	Soil
	B06N67	B06N77	Soil
	B06N68	B06N78	Soil
	B06N69	B06N79	Soil
	B06N70	B06N80	Soil
	B06N71	B06N81	Soil
	B06N72	B06N82	Soil

Sample identifications, dates received, and analyte concentrations are provided in the enclosed analysis data sheets. Data validation was conducted in accordance with the Westinghouse Hanford Company statement of work (WHC 1991) and validation procedures (WHC 1992). The data validation procedure is a review of laboratory performance and implementation of applicable protocols. Subsequent technical data evaluation by project lead personnel should include a determination of the appropriateness of results from a standpoint of past history and present knowledge of the sample site.

2. DATA QUALITY OBJECTIVES

Completeness

The data package was complete for all requested analyses and met the data quality objectives of the work plan. Data quality objectives for the project specified the use of CLP methods for the TAL metals analytes.

Data Qualification

The data is acceptable and useable given the attached qualifiers.

3. QUALIFIED DATA

This section presents a summary of the qualifications required based on validation of the subject data package (See Data Qualification Summary - Form B - 8).

3.1 Major Deficiencies

No major deficiencies were noted in the data.

3.2 Minor Deficiencies

The following qualifications were required as a result of the validation.

- Aluminum, antimony, beryllium, cadmium, calcium, iron, magnesium, selenium, silver, sodium, and zinc were detected in the laboratory and/or preparation blanks above their IDLs. Contaminants were detected in various samples at concentrations less than five times the highest concentrations found in the blanks and these have been qualified as non-detects (U).

- Duplicates for lead and zinc were outside limits. All samples were qualified as estimated (J).

- Analytical spike recovery of arsenic, lead, selenium, and thallium was outside control limits, therefore the results have been qualified as estimated (UJ for non-detects).

- ICP interference check indicated that sample results for sodium should be qualified as estimated (J).

4. CONCLUSION

The results contained in this report are acceptable for use.

6. LABORATORY BLANKS

Are target analytes present in the laboratory blanks? (Yes) No N/A

ACTION: Qualify all associated sample results for any analyte <5 times the amount in any laboratory blank as nondetected (U). If analyte concentrations in the blank are >CRDL or below the negative CRDL, verify the laboratory has redigested and reanalyzed associated samples with analyte concentrations <10 times the blank concentration. If the laboratory has not redigested and reanalyzed the samples, note in the validation narrative.

7. FIELD BLANKS

Are target analytes present in the field blanks? Yes No (N/A)

ACTION: Qualify all sample results for any analyte <5 times the amount in any valid field blank as nondetected (U).

* No field blanks were identified in the sample delivery group.

8. MATRIX SPIKE SAMPLE ANALYSIS

Are spike recoveries within the control limits? (Yes) No N/A

ACTION: Qualify the affected sample data according to the following requirements:

If spike recovery is >125% and sample results are <IDL no qualification is required. If spike recovery is >125% or <75% qualify all positive results as estimated (J). If spike recovery is 30% to 74% qualify all nondetects as estimated (UJ). If spike recovery is <30%, reject all nondetects (R). If the field blank has been used for spike analysis, note in the validation narrative.

9. LABORATORY CONTROL SAMPLE

Are percent recoveries within the acceptance limits? (Yes) No N/A

Are there calculation errors? Yes (No) N/A

ACTION: Qualify the sample data according to the following requirements:

AQUEOUS LCS - Qualify as estimated (J), all sample results >IDL, for which the LCS %R falls within the range 50-79% or >120%. Qualify as estimated (UJ), all sample results <IDL, for which the LCS falls within the range of 50-79%. Qualify as unusable (R) all sample results, for which the LCS %R <50%.

SOLID LCS - Qualify as estimated (J), all sample results >IDL for which the LCS result is outside the established control limits. Qualify as estimated (UJ), all sample results <IDL for which the LCS %R are lower than the established control limits.

If no, were MSA analyses performed when required?	Yes	No	N/A
Are MSA correlation coefficients ≥ 0.995?	Yes	No	N/A
If no, was a second MSA analysis performed?	Yes	No	N/A

ACTION: If duplicate injections are outside the acceptance limits and the sample has not been reanalyzed or the reanalysis is outside the acceptance limits, qualify the associated data as estimated (J for detects and UJ for nondetects). If the analytical spike recovery is <40% qualify detects as estimated (J). If the analytical spike recovery is $\geq$10% but <40%, qualify all nondetects as estimated (UJ) and if the analytical spike recovery is <10%, reject all nondetects (R). If the sample absorbance is <50% of the analytical spike absorbance and the analytical spike recovery is <85% or >115%, qualify all results as estimated (J for detects and UJ for nondetects). If method of standard additions (MSA) was required but was not performed, the MSA samples were spiked incorrectly, or the MSA correllation coefficient was <0.995, qualify the associated detected results as estimated (J).

17. ANALYTE QUANTITATION AND DETECTION LIMITS

Have results been reported and calculated correctly?	Yes	No	N/A
Are results within the calibrated range of the instruments and within the linear range of the ICP?	Yes	No	N/A
Are all detection limits below the CRQL?	Yes	No	N/A

Action: If analyte quantitation is in error, contact the laboratory for explanation. If errors or deficiencies can not be resolved with the laboratory, qualify associated data as unusable (R).

18. OVERALL ASSESSMENT AND SUMMARY

Has the laboratory conducted the analysis in accordance with the analytical SOW?	Yes	No	N/A
Were project specific data quality objectives met for this analysis?	Yes	No	N/A

ACTION: Summarize all the data qualifications and complete the data validation narrative as specified in Section 10.0 of the data validation requirements.

Validation Narrative - SDG: B06N83

1. INTRODUCTION

This report presents the results of inorganic data validation on the following sample delivery group and sample numbers which were analyzed by the Thermo Analytical, Inc. - Richmond, CA laboratory. The HEIS sample numbers associated with this group by SDG are listed below:

Data Package ID	HEIS Sample Numbers		Matrix
SDG: B06N63	B06N83	B06N89	Soil
	B06N84	B06N90	Soil
	B06N85	B06N91	Soil
	B06N86	B06N92	Soil
	B06N87	B06N93	Soil
	B06N88	B06N94	Soil

Sample identifications, dates received, and analyte concentrations are provided in the enclosed analysis data sheets. Data validation was conducted in accordance with the Westinghouse Hanford Company statement of work (WHC 1991) and validation procedures (WHC 1992). The data validation procedure is a review of laboratory performance and implementation of applicable protocols. Subsequent technical data evaluation by project lead personnel should include a determination of the appropriateness of results from a standpoint of past history and present knowledge of the sample site.

2. DATA QUALITY OBJECTIVES

Completeness

The data package was complete for all requested analyses and met the data quality objectives of the work plan. Data quality objectives for the project specified the use of CLP methods for the TAL metals analytes.

Data Qualification

The data is acceptable and useable given the attached qualifiers.

3. QUALIFIED DATA

This section presents a summary of the qualifications required based on validation of the subject data package (See Data Qualification Summary - Form B - 8).

3.1 Major Deficiencies

No major deficiencies were noted in the data.

3.2 Minor Deficiencies

The following qualifications were required as a result of the validation.

- Aluminum, antimony, barium, beryllium, cadmium, calcium, copper, iron, magnesium, manganese, mercury, sodium, vanadium, and zinc were detected in the laboratory and/or preparation blanks above their IDLs. Contaminants were detected in various samples at concentrations less than five times the highest concentrations found in the blanks and these have been qualified as non-detects (U).

  Arsenic, mercury, and zinc matrix spike recoveries exceeded the control limits. All affected results were qualified as estimated (J), (UJ for non-detects).

- Duplicates for calcium, manganese, and potassium were outside limits. All samples were qualified as estimated (J).

- Analytical spike recoveries of arsenic, lead, selenium, and thallium were outside control limits, therefore the results have been qualified as estimated (UJ for non-detects).

- ICP interference check indicated that sample results for sodium should be qualified as estimated (J).

- ICP serial dilution indicated that results for certain samples of iron should be qualified as estimated (J).

4. CONCLUSION

The results contained in this report are acceptable for use.

2. HOLDING TIMES

Have all samples been analyzed within holding times? (Yes) No N/A

ACTION: If any holding times have been exceeded qualify all affected results as estimated (J for detects and UJ for nondetects).

3. INITIAL CALIBRATIONS

Were all instruments calibrated daily, each set-up time and were the proper number of standards used? (Yes) No N/A

Are the correlation coefficients ≥0.995? (Yes) No N/A

Was a midrange cyanide standard distilled? Yes No (N/A)

ACTION: Qualify all data as unusable if reported from an analysis in which an instrument was not calibrated or was calibrated with less than the minimum number of standards. Qualify associated sample results >IDL as estimated (J) and results <IDL as estimated (UJ), if the correlation coefficient is <0.995 or the laboratory did not distill the midrange cyanide standard.

4. INITIAL AND CONTINUING CALIBRATION VERIFICATION

Are ICV and CCV percent recoveries within control? (Yes) No N/A

Are there calculation errors? Yes (No) N/A

ACTION: Qualify all affected data in accordance with Section 8.3 of the validation requirements. If calculation errors are noted, contact the laboratory for clarification.

5. ICP INTERFERENCE CHECK SAMPLE

Has an ICS sample been analyzed at the proper frequency? (Yes) No N/A

Are the AB solution %R values within control? (Yes) No N/A

Are there calculation errors? Yes (No) N/A

ACTION: Qualify all affected data in accordance with Section 8.3 of the validation requirements. If calculation errors are noted, contact the laboratory for clarification.

* SODIUM COULD BE A POTENTIAL FALSE POSITIVE. QUALIFY ALL POSITIVE SAMPLE RESULTS FOR SODIUM AS ESTIMATED (J).

6. LABORATORY BLANKS

Are target analytes present in the laboratory blanks? (Yes) No N/A

ACTION: Qualify all associated sample results for any analyte <5 times the amount in any laboratory blank as nondetected (U). If analyte concentrations in the blank are >CRDL or below the negative CRDL, verify the laboratory has redigested and reanalyzed associated samples with analyte concentrations <10 times the blank concentration. If the laboratory has not redigested and reanalyzed the samples, note in the validation narrative.

7. FIELD BLANKS

Are target analytes present in the field blanks? Yes No (N/A)

ACTION: Qualify all sample results for any analyte <5 times the amount in any valid field blank as nondetected (U). * No field blanks were identified in the sample delivery group.

8. MATRIX SPIKE SAMPLE ANALYSIS

Are spike recoveries within the control limits? Yes (No) N/A

ACTION: Qualify the affected sample data according to the following requirements:

If spike recovery is >125% and sample results are <IDL no qualification is required. If spike recovery is >125% or <75% qualify all positive results as estimated (J). If spike recovery is 30% to 74% qualify all nondetects as estimated (UJ). If spike recovery is <30%, reject all nondetects (R). If the field blank has been used for spike analysis, note in the validation narrative.

9. LABORATORY CONTROL SAMPLE

Are percent recoveries within the acceptance limits? (Yes) No N/A

Are there calculation errors? Yes (No) N/A

ACTION: Qualify the sample data according to the following requirements:

AQUEOUS LCS - Qualify as estimated (J), all sample results >IDL, for which the LCS %R falls within the range 50-79% or >120%. Qualify as estimated (UJ), all sample results <IDL, for which the LCS falls within the range of 50-79%. Qualify as unusable (R) all sample results, for which the LCS %R <50%.

SOLID LCS - Qualify as estimated (J), all sample results >IDL for which the LCS result is outside the established control limits. Qualify as estimated (UJ), all sample results <IDL for which the LCS %R are lower than the established control limits.

10. PERFORMANCE AUDIT ANALYSES

Are the performance audit sample results within the acceptance limits? Yes No N/A

ACTION: Note the results of the performance audit sample analyses in the data validation narrative.

* No performance audit analyses were identified in the sample delivery group.

11. DUPLICATE SAMPLE ANALYSIS

Are RPD values acceptable? Yes No N/A

ACTION: Qualify the results for all associated samples of the same matrix as estimated (J) if the RPD results fall outside the appropriate control limits. If field blanks were used for laboratory duplicates, note in the validation narrative.

12. ICP SERIAL DILUTION

Are the serial dilution results acceptable? Yes No N/A

Is there evidence of negative interference? Yes No N/A

ACTION: Qualify the associated data as estimated (J) for those analytes in which the %D is outside the control limits. If evidence of negative interference is found, use professional judgment to qualify the data. * IF SAMPLE RESULT FOR IRON IS ≥ 116 MG/KG, QUALIFY RESULT AS (J).

13. FIELD DUPLICATE SAMPLES

Do the RPD values exceed the control limits? Yes No N/A

ACTION: Note the results of the field duplicate samples in the validation narrative.

14. FIELD SPLIT SAMPLES

Do the RPD values exceed the control limits? Yes No N/A

ACTION: Note the results of the field split samples in the validation narrative.

* No field duplicates or field splits were identified in the sample delivery group

1516. FURNACE ATOMIC ABSORPTION QUALITY CONTROL

Do all applicable analyses have duplicate injections? Yes No N/A

Are applicable duplicate injection RSD values within control? Yes No N/A

If no, were samples rerun once as required? Yes No N/A

Does the RSD for the rerun fall within the control limits? Yes No N/A

Were analytical spike recoveries within the control limits? Yes No N/A

If no, were MSA analyses performed when required?	Yes	No	N/A
Are MSA correlation coefficients $\geq$0.995?	Yes	No	N/A
If no, was a second MSA analysis performed?	Yes	No	N/A

ACTION: If duplicate injections are outside the acceptance limits and the sample has not been reanalyzed or the reanalysis is outside the acceptance limits, qualify the associated data as estimated (J for detects and UJ for nondetects). If the analytical spike recovery is <40% qualify detects as estimated (J). If the analytical spike recovery is $\geq$10% but <40%, qualify all nondetects as estimated (UJ) and if the analytical spike recovery is <10%, reject all nondetects (R). If the sample absorbance is <50% of the analytical spike absorbance and the analytical spike recovery is <85% or >115%, qualify all results as estimated (J for detects and UJ for nondetects). If method of standard additions (MSA) was required but was not performed, the MSA samples were spiked incorrectly, or the MSA correllation coefficient was <0.995, qualify the associated detected results as estimated (J).

17. ANALYTE QUANTITATION AND DETECTION LIMITS

Have results been reported and calculated correctly?	Yes	No	N/A
Are results within the calibrated range of the instruments and within the linear range of the ICP?	Yes	No	N/A
Are all detection limits below the CRQL?	Yes	No	N/A

Action: If analyte quantitation is in error, contact the laboratory for explanation. If errors or deficiencies can not be resolved with the laboratory, qualify associated data as unusable (R).

18. OVERALL ASSESSMENT AND SUMMARY

Has the laboratory conducted the analysis in accordance with the analytical SOW?	Yes	No	N/A
Were project specific data quality objectives met for this analysis?	Yes	No	N/A

ACTION: Summarize all the data qualifications and complete the data validation narrative as specified in Section 10.0 of the data validation requirements.
